

Mapillary Coverage in Izmir

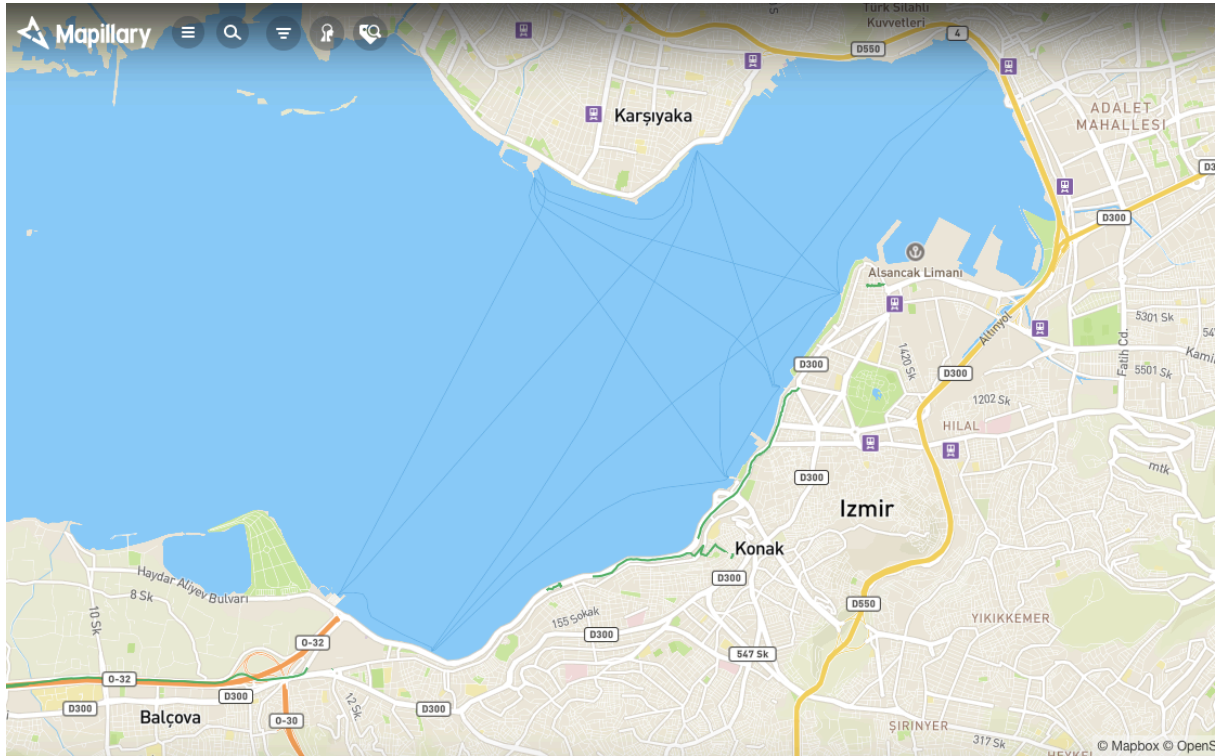

About Mapillary:

Mapillary is a passionate community of people who want to make the world accessible to everyone by creating an image representation of the world. Anyone can join the community and collect street level images by using simple tools like smartphones or action cameras. By connecting images across time and users, we can create an immersive street level image view for people to virtually explore different places in the world. It could be a walk on a beach in Costa Rica, the streets of Tokyo or a drive through the Swedish countryside. We simply want to empower you to decide which streets, roads and hidden paths should be mapped, and when. There is no longer a need to wait for someone else to take street level images for you. Our participants took a street-level imagery in Izmir, Turkey. Please click the link to visit [Mapillary in Izmir](#)

OpenStreetMap (OSM) is a collaborative project to create a free editable map of the world. The creation and growth of OSM has been motivated by restrictions on use or availability of map information across much of the world, and the advent of inexpensive portable satellite navigation devices. OSM is considered a prominent example of volunteered geographic information. OpenStreetMap is built by a community of mappers that contribute and maintain data about roads, trails, cafés, railway stations, and much more, all over the world. OpenStreetMap is built by a community of mappers that contribute and maintain data about roads, trails, cafés, railway stations, and much more, all over the world. This two ICT tools are used to create [Izmir Accessibility Map](#). This map is free and open for

every one.
